

Advances in Supercapacitor Technology and Applications

Guest Editors:

Prof. Dr. Alon Kuperman

Department of Electrical & Computer Engineering, Ben-Gurion University of the Negev, Beer-Sheba, Israel

alonk@bgu.ac.il

Dr. Alessandro Lampasi

Electrical and Electronic Engineering Unit, ENEA, Rome, Italy

alessandro.lampasi@enea.it

Deadline for manuscript submissions:

30 April 2019

Message from the Guest Editors

Energy storage is a key topic for research, industry and business, gaining more and more interest. Supercapacitors (also known as ultracapacitors, electrochemical capacitors or double-layer capacitors) feature exceptional capacitance values, creating new scenarios and opportunities in both research and industrial applications, also because the related market is relatively recent. Developments in supercapacitor technology and supporting electronics, combined with reductions in costs, may revolutionize everything from large power systems to consumer electronics. We are inviting submissions to this Special Issue of *Energies* to collect the latest developments and applications in this field, but also to compare supercapacitors with other energy storage solutions.

Keywords

- supercapacitors
- energy storage
- energy management
- power systems
- power electronics
- pulsed power
- high power testing and modeling
- fast control
- peak shaving
- electrical machines and drives
- electric and hybrid vehicles

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), Ei Compendex, Scopus and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 15 days after submission; acceptance to publication is undertaken in 6.06 days (median values for papers published in the first six months of 2018).
