

NAG Library Routine Document

F06FGF

Note: before using this routine, please read the Users' Note for your implementation to check the interpretation of ***bold italicised*** terms and other implementation-dependent details.

1 Purpose

F06FGF performs the operation

$$x \leftarrow -x$$

where x is an n element real vector.

2 Specification

```
SUBROUTINE F06FGF(N, X, INCX)
  INTEGER          N, INCX
  double precision X(*)
```

3 Description

None.

4 References

None.

5 Parameters

- 1: N – INTEGER *Input*
On entry: n , the number of elements in x .
- 2: X(*) – **double precision** array *Input/Output*
Note: the dimension of the array X must be at least $1 + (N - 1)|INCX|$.
On entry: the incremented array X must contain the n element vector x .
On exit: the vector $-x$.
- 3: INCX – INTEGER *Input*
On entry: the increment in the subscripts of X between successive elements of x .
Constraint: $INCX > 0$.

6 Error Indicators and Warnings

None.

7 Accuracy

Not applicable.

8 Further Comments

None.

9 Example

None.
